

***Vanpro in the "clutches" of another great client.***

Cambridge, MN September 17, 2010- Vanpro announces it has been awarded a major project machining a large custom clutch housing. The housing is an AZ91 magnesium casting, and Vanpro provides a significant level of value add finish work. This includes bead blasting for removal of excess parting line and ejector pin flash, milling and lathe operations.

The program is in pre-production status, and expected to go into full production during the 4th quarter of 2010.
